# Legioblock®

We build solutions

**Legioblock®** are heavy weight interlocking concrete blocks. Easy to install, adjust, move or expand. The blocks are fire-resistant and can be build up to a height of 8.8 meters. The maximum height of the construction depends on the maximum reach of the crane on site.

**Legioblock®** are fire resistant for up to 4 hours of exposure. The temperature rise on the non-exposed side of the concrete wall is so low that the fire propagation through heat transfer is nonexistent. Even in persistent fires that lasted for several days Legioblock walls retained their integrity and prevented the fire from spreading to neighboring buildings.

Storage bays

Fire resistant

**Legioblock®** are the optimal solution for a rapid and a flexible construction. The blocks are easily stacked and placed, without the need of cement or any other bonding agent. This allows complete freedom to modify or expand the blocks at any time and any place.

**Legioblock®** are the ideal solution for the construction of storage bays, retaining walls, bunkers, partition walls, fire resistant walls, factory halls, industrial workspaces and many more. Thanks to its durability and flexibility, these blocks offer a highly cost-effective solution.

Stacked and placed

**Legioblock®** have short delivery lead times. The blocks can be stacked and placed directly from the delivery truck. This allows the possibility to have a wall structure in only a matter of hours. After finishing the structure, the walls can be used immediately. That the blocks can be removed and relocated makes them ideal for both permanent and temporary applications.

Partition wall

Jansen Concrete Products offers a complete service package including design, static calculations, transport, an expert construction and even a roofing structure. This way you have only one point of contact for the realization of your entire project.
